

We're pleased with the State of New York Supreme Court's decision to dismiss the Sierra Club's suit regarding our approved expansion project. As we have consistently stated, the Environmental Impact Statement prepared under New York's SEQRA act was thorough and complete, demonstrating our commitment to permit, build, and operate safe and sustainable waste management facilities. Our Hakes facility is an important component of the waste management infrastructure in New York state, and we believe that this decision reaffirms that our operations, environmental monitoring, and facility management practices provide safe, effective waste disposal services.
