

DEC subjects all applications for environmental permits to a rigorous review process to protect public health and the environment. DEC is currently reviewing Leo Dickson and Sons, Incorporated's request to transfer their Part 360 - Solid Waste Management Facility Permit to Casella Organics. All State solid waste regulations and requirements of the existing permit will need to be met regardless of who the permittee is. The Part 360 series requirements are applicable to land application to improve soil quality and provide plant nutrients on agricultural soils. Application documents specify that crops are grown on all fields receiving material. The permittee is responsible for obtaining any other permits, or approvals that may be required to carry out the activities that are authorized by its DEC permit.
