Mine Inspection Record(s)

[\[Go Back\]](#)

Information presented on this page is from inspections conducted by Mined Land staff and stored in our database. Note that there may be a drop-down list of multiple inspection dates available. Due to changes in data management practices over time, older inspection records are not as complete as new ones. Regarding inspections conducted specifically at the reclamation stage, some older reclamation information may be found here. However, newer more detailed reclamation inspection records can be found under the “Reclamation Inspections” link off the main Mines Data Search.

Comments	Area outside the approved Life of Mine (southern portion of mine near cemetery) has not been reclaimed as agreed to in consent order, area is void of vegetation and minimal if any grading work. Berms at the eastern portion of mine (adjacent to Village stormwater ditch) continue to not be properly vegetated, Berm is in place but downslope sections have rilling and washouts. Berms must be vegetated to stabilize berm and minimize rilling, washouts and erosion. Berms must be seeded asap as weather permits. Currently excavating western face and has dug deeper to what appears to be ground water (photos taken). As stated in the approved plans- this area will be backfilled to a minimum of 5 feet above ground water table and will not be re-affected.
